

*"If you want to teach people a new way of thinking,  
don't bother trying to teach them.  
Instead, give them a tool, the use of which  
will lead to new ways of thinking".*

**Richard Buckminster Fuller**

In the last decades, we have improved various aspects of our lives, just think of the technological, scientific and medical progress we could experience. Then why are our cities still so jammed? Why is it becoming harder and harder to reach the workplace and to find a parking spot?

### The solution already exists and is called EbikeMe!

#### EbikeMe, sustainable and efficient

EbikeMe is an innovative Italian start-up which was set up after observing the reality surrounding us. When we drive in the city, we spend a lot of time in our cars stuck in the traffic jam even for short distances. Once we get to work, we spend further precious time to find a parking spot. No wonder we start our working day already stressed and nervous! The idea at the heart of EbikeMe is giving an answer to this situation with long-term rental of e-bikes for companies. Our bikes are 100% made in Italy and you can customize them with your logo, to convey an eco-friendly image. Furthermore, employees and – why not? – even CEOs will save precious time while staying...healthier!

#### Endless possibilities, endless advantages!

Riding traditional bikes hardly has any drawbacks. With e-bikes, it is even harder to find any disadvantages! Riding an e-bike to go to work can benefit both the rider and the people around us, as well as the companies that invest and believe in the project of sustainable mobility designed by EbikeMe, being them SME's or multinational companies.

With our City Bike you can easily ride around the city, with no effort nor sweating (even within a range of 20 km). Thanks to the powerful pedal assistance, the City Bike can reach 25 km/h and has a range of 60 kilometres. It is equipped with an antitheft chain and a case where you can store your personal belongings. You will get to office relaxed and ready to start your working day!

Riding an e-bike offers many more possibilities than driving a car, especially in a hectic society where we are always on the move. Maybe your office is located in a restricted driving zone, or you have a meeting with a client only few kilometres away, or you fancy a relaxing lunchbreak while cycling to a green area or a park, or simply around the city! The possibilities are endless; we only need the right push to put them into practice...This is the purpose of EbikeMe!

### Good for your health...

Investing in a sustainable mobility project is an important step for a company. With a small investment, every company can get a fleet of customized e-bikes that will “carry around” the company name! EbikeMe allows companies to implement their programmes for corporate social responsibility and to focus on the psycho-physical health of their employees: it is enough to cycle few kilometres a day, provided that you do it often, to understand how healthy it is for your body and mind! Going to work by e-bike reduces the stress levels and improves your health. In 2017, the British Medical Journal published a study (lasted 5 years and carried out on more than 250.000 patients) showing that people who bike to work have 45% lower chance of contracting cancer, and people who cycle 48 kilometres on average per week have 46% lower chance of developing cardiovascular diseases. These results are astonishing! Moreover, some studies carried out by the World Health Organization show that people who bike three hours per week have 28% lower chance of dying compared to those who do not bike at all. Let's think in terms of years, which are maybe clearer than percentages: from 1996 to 2008 a study carried out on more than 400.000 people showed that 15 minutes of physical exercise per day increase the average survival by 3 years compared to people who do not exercise! We don't need that much to improve our health and the health of people around us!

### ...and for the economy!

When the quality of life improves, the efficiency of the healthcare system of a country increases as well, as the number of patients to be treated reduces. If we all biked just 3 hours per week, beside the physical exercise that we would do, imagine how many kilometres we could cover by contributing to reducing air and noise pollution and traffic. Moreover, the bike world contributes to a country's economy: in Italy, for instance, the bike production, sales and maintenance move over 1 billion euros per year and two-wheel lovers contribute about 2 billion euros to Italy's economy thanks to cycling tourism. These figures can only increase!

### EbikeMe is ready, it's just time to ride!

“There's no such thing as bad weather, only unsuitable clothing.” With the appropriate clothing, everyone could bike to work even during rainy, cold and windy days! In some European countries such as Germany, the Netherlands and Denmark, just to mention a few, the bike is considered a real mean of transport. These countries should be taken as good examples. Each and every one of us can be the change that we want to see: we should not wait for good weather conditions, nor for perfect bike paths to be built everywhere. Let's just take our bike and begin to ride.

**NOT ONLY BIKE-TO-WORK**

**BUT ALSO FOR LEISURE**

**FROM THE LAKES TO THE SEA, FROM OLD VILLAGES TO HILLS**

**BEYOND THE ROADS ON EVERY KIND OF GROUND**

Riding the best Italian bikes, you will be the main actors of sustainable mobility. If you wish to use your bike in your free time as well, you can choose Mountain Bikes by Ebikeme: Sunday rides in the woods, on the hills, at the lake or at the seaside...many possibilities surrounded by nature with fun!

The e-bikes of Ebikeme will be the highlight of companies that believe in sustainable mobility and that care for their employees and for the environment. Investing in an e-bike means adopting an innovative and fast mean of transport and embracing a sustainable idea, while doing something real to improve our future!

#### **City Bike**

**Battery:** 36V 11,6ah 420wh  
**Motor:** Bafang Hub motor Brushless 250W  
36V Max Torque 30Nm  
**Range:** 60 Km  
**Gear:** Shimano Acera 7 Speeds  
**Display:** Bafang LCD 4" multifunzione/walk  
boost/backlight  
**Weight:** Kg 24,50  
**Material:** aluminium

#### **Mountain Bike**

**Battery:** 36V, 14,5 Ah, 522 Wh  
**Motor:** Oli Move Plus 250W, 36V  
Max Torque 80Nm (Italian production)  
**Fork:** Suntour Xcm 32-DS-R115 QLC32  
**Gear:** Shimano Deore M6000 Shadow, 10V  
**Brakes:** Hydraulic Shimano M315  
**Disks:** Shimano Rt26 180 F / 180 R  
**Tyres:** Veetyre Plus – suitable for sand and snow  
**Weight:** Kg 24,00  
**Material:** aluminium

# THE NEW WAY OF MOVING AROUND

*"We see the effects of climate change and scientists clearly show the way forward. Each and every one of us has a responsibility. No one excluded. We all have a moral responsibility - be it small or big – in accepting, giving an opinion or making decisions".*  
**Pope Francis**

We are at the Scientific Park POINT in Dalmine, Via Einstein, with other companies of the Industry 4.0, close to the A4 MI-VE motorway (exit Dalmine).
